SUMMARY

AI Engineer specializing in Agentic AI systems and production-grade Retrieval-Augmented Generation (RAG) architectures. Experienced in building autonomous AI agents using LangGraph, LangChain, CrewAI, and scalable workflow automation systems. Skilled in LLMOps, CI/CD automation, Dockerized deployment, vector databases, and end-to-end machine learning pipelines with production-ready AI systems.

EXPERIENCE

Metropolitan Warehouse & Delivery Corp.

2025 – Present

Junior AI Engineer

USA (Remote)

- Architected an agentic dispatch system using LangGraph to automate multi-route logistics decisions, reducing manual intervention by 35%.
- Implemented persistent state checkpoints and human-in-the-loop workflows ensuring reliable recovery during interruptions.
- Optimized SQL-agent schema mapping reducing query latency by 20% on logistics databases.
- Worked on scalable production-grade AI workflows using AWS, Docker, and modular deployment pipelines.

University of Azad Jammu and Kashmir

2023 – 2024

Machine Learning Lab Assistant

Pakistan

- Standardized preprocessing pipelines for CNN and NLP labs used by 40+ students.
- Developed automated benchmarking scripts reducing model evaluation cycles by 50%.
- Assisted students in practical Machine Learning and Deep Learning implementations.

PROJECTS

Persistent Role-Play Interviewer Agent | LangGraph, AWS, Python

2026

- Engineered an autonomous interviewer using LangGraph with persistent memory and multi-session state retention.
- Deployed the system on AWS using scalable modular architecture for concurrent users.
- Implemented production-level workflow orchestration and fault recovery mechanisms.

Agentic Email Assistant | LangGraph, Docker, AI Agents

2026

- Built a modular email automation assistant using LangGraph and Dockerized deployment pipelines.
- Improved drafting efficiency by 90% using autonomous tool-augmented reasoning systems.
- Integrated scalable workflow pipelines and intelligent filtering systems.

AI Multi-Agent Workflow Automation | CrewAI, Pinecone,

2026

- Developed enterprise-grade multi-agent automation systems using CrewAI and n8n workflows.
- Integrated vector databases including Pinecone, ChromaDB, and Weaviate for semantic search and long-term memory retrieval.

- Built scalable AI orchestration pipelines for workflow automation and autonomous task execution.

Weather Forecast Prediction System | Machine Learning, MLOps, DVC, MLflow

2025

- Developed an end-to-end machine learning pipeline for weather forecasting using automated preprocessing and training workflows.
- Implemented DVC for dataset versioning and MLflow for experiment tracking and model lifecycle management.
- Containerized the project using Docker and integrated CI/CD workflows for scalable deployment.
- Performed feature engineering, model monitoring, and validation for production-ready forecasting systems.

LangGraph Recursive Research Suite | Python, LangGraph, AI Agents

2025

- Built a DAG-based autonomous research agent supporting recursive web synthesis workflows.
- Successfully handled 1000+ recursive queries with a 92% task completion rate.
- Developed advanced multi-step reasoning and autonomous task orchestration systems.

EDUCATION

University of Azad Jammu and Kashmir (UAJK)

2021 – 2025

Bachelor of Science in Computer Science

Pakistan

- **CGPA:** 3.2/4.0
- **Coursework:** Machine Learning, Deep Learning, Data Structures, Algorithms, Database Systems, Operating Systems

SKILLS

Programming Languages : Python, C++, SQL, Node.js, HTML/CSS
AI Frameworks : LangGraph, LangChain, CrewAI, Agentic AI, Production RAG
Vector Databases : Pinecone, ChromaDB, Weaviate
MLOps & DevOps : AWS, Docker, GitHub Actions, CI/CD, MLflow, DVC
Automation & Deployment : n8n, REST APIs, Hugging Face Spaces, Railway
Databases : PostgreSQL, MySQL

CERTIFICATIONS

Google Cloud GenAI Studio	2026
AI Agents Specialist – Analytics Vidhya	2026
Advanced Machine Learning – UniAthena	2025
SQL for Data Science – Simplilearn	2025

ACHIEVEMENTS

- Built and deployed 5+ production AI systems with persistent recovery mechanisms and autonomous monitoring workflows.
- Improved AI agent reliability through checkpointing and recovery systems reducing operational downtime significantly.
- Worked extensively on production-grade Agentic AI systems and scalable RAG architectures.
