Technical Summary

AI Engineer specializing in Agentic AI systems and production-grade Retrieval-Augmented Generation (RAG) architectures. Proven expertise in building fault-tolerant autonomous agents using LangGraph and LangChain, focusing on state persistence, reliability, and multi-step reasoning. Experienced in LLMOps, CI/CD automation, and deploying scalable AI systems in real-world production environments.

Education

University of Azad Jammu and Kashmir (UAJK)

Bachelor of Science in Computer Science

2021 – 2025

Pakistan

Technical Skills

AI Systems:: LangGraph (Expert), LangChain, Agentic AI, Production RAG, LLM Fine-Tuning

MLOps & DevOps:: AWS, Docker, GitHub Actions, CI/CD, MLflow, DVC

Deployment:: Hugging Face Spaces, Railway, AWS, REST APIs

Languages:: Python, C++, SQL (PostgreSQL/MySQL), Node.js, HTML5/CSS3

Experience

Metropolitan Warehouse & Delivery Corp.

2025 – Present

AI Engineer Intern

USA (Remote)

- Architected an agentic dispatch system using LangGraph to automate multi-route logistics decisions, reducing manual intervention by 35%.
- Implemented persistent state checkpoints and human-in-the-loop workflows, ensuring 100% recovery during system interruptions.
- Optimized SQL-agent schema mapping, reducing query latency by 20% on large-scale logistics databases.

University of Azad Jammu and Kashmir

2023 – 2024

Machine Learning Lab Assistant

Pakistan

- Standardized preprocessing pipelines for CNN and NLP labs used by 40+ students.
- Developed automated benchmarking scripts, reducing model evaluation cycles by 50%.

Notable Projects

Persistent Role-Play Interviewer Agent | LangGraph, AWS, Python

2026

- Engineered an autonomous interviewer using LangGraph with 100% accuracy in state retention across multi-session role-play interactions.
- Deployed the system on AWS using modular architecture to handle concurrent high-traffic user sessions.

Agentic Email Assistant | LangGraph, Docker, Modular Coding

2026

- Built a modular email automation assistant using LangGraph and Docker for seamless enterprise deployment.
- Improved response drafting efficiency by 90% through autonomous tool-augmented reasoning and custom filtering loops.

LangGraph Recursive Research Suite | Python, LangGraph

2025

- Built a DAG-based autonomous research agent supporting recursive web synthesis.
- Successfully handled 1,000+ recursive queries with a 92% task completion rate.

Certifications

Google Cloud GenAI Studio (2026):: Production LLM tuning and deployment

AI Agents Specialist:: Analytics Vidhya

Advanced Machine Learning:: UniAthena (Cambridge Qualification)

SQL for Data Science:: Simplilearn (ID: 9632970)

Achievements

Production Grade:: Built and deployed 5+ production AI systems with persistent state recovery and autonomous monitoring.

Reliability:: Improved agent reliability through checkpointing, significantly reducing downtime.
